Objective • The primary objective of the course is to enable students to gain experience on producing spatial solutions arising from different relations, and to gain ability on thinking in a sophisticated background starting from early stages of architectural design. **Content** • Architectural Design 1 focuses on housing and dwelling through the relationships between user, space, and environment. Students analyze an existing house in terms of its context, spatial organization, and design decisions, and represent it at 1:100 scale. Based on the user profile and life scenario, spatial requirements and the architectural program are developed and related to site and environmental data to define the design problem. Alternative design approaches are explored, and the selected proposal is further developed at 1:100 scale and represented through architectural drawings and models.
